

By Kaif Saleem

BRICKS DESIGN SYSTEM

Building a design system end-end

STRUCTURING DESIGN SYSTEM

Why we did it?

1

Too many inconsistencies in the product

2

Loss of competitiveness

3

Redundancy in day to day life

AUDIT PRACTICE . DISCOVER

Here is how we did it

Inventory every live pattern across the product not just the ones you remember

Tag each finding by frequency and risk, not just how ugly it looks

Flag duplicate, contradictory, or off-brand components as you go

Turn the audit into the system's first roadmap, in priority order

Mapping the current situation

STRUCTURING OF DESIGN SYSTEM

Define Tokens . Variables

01PRIMARY PALETTE

Primary Purple Palette

Refined tonal progression with smoother chroma transitions. Luxurious, luminous, and modern — without electric or neon quality.

FOUNDATION

Adding Sementic Layer

Semantic Tokens ↔ Primitive Steps

Grouped by state. Each state provides four tokens — use all four together when building banners, alerts, or status indicators.

Info

Token	→ Primitive	Hex	Role
Semantic Surface/info	Blue/50	#EEF4FF	Background — banner, tag, alert container
Semantic Border/info	Blue/200	#B7D0FF	Outline — banner border, card border
Semantic Icons/info	Blue/600	#2F6FEA	Icon fill — info icon inside the banner
Semantic Text/info	Blue/800	#214EAD	Text — body copy inside info context

Success

Token	→ Primitive	Hex	Role
Semantic Surface/success	Green/50	#EDF8EE	Background — banner, tag, alert container
Semantic Border/success	Green/200	#BFE3C6	Outline — banner border, card border
Semantic Icons/success	Green/600	#2F7F49	Icon fill — success icon inside the banner
Semantic Text/success	Green/800	#245F36	Text — body copy inside success context

Warning

Token	→ Primitive	Hex	Role
Semantic Surface/warning	Yellow/50	#FFF8E8	Background — banner, tag, alert container
Semantic Border/warning	Yellow/200	#F0D79A	Outline — banner border, card border
Semantic Icons/warning	Yellow/600	#B07F25	Icon fill — warning icon inside the banner
Semantic Text/warning	Yellow/800	#7A5514	Text — body copy inside warning context

Danger

Token	→ Primitive	Hex	Role
Semantic Surface/danger	Red/50	#FFF0EE	Background — banner, tag, alert container
Semantic Border/danger	Red/200	#F1B7AE	Outline — banner border, card border
Semantic Icons/danger	Red/600	#BE3F31	Icon fill — danger icon inside the banner
Semantic Text/danger	Red/800	#8A2B20	Text — body copy inside danger context

✓ Consistent alignment

Aspect	Mobile Web	Desktop Web	iOS	Android
Snap physics	Browser default	Browser default	Native (best)	Native (good)
Momentum decay	Inconsistent	Awkward	Excellent	Excellent
Velocity-based snap	Limited	Poor	Excellent	Excellent
Peek-next-card	✓	✗	✓	✓
Snap-on-release fidelity	Good	Poor	Excellent	Excellent

WHY GRIDS STILL APPLY HERE

The 4-column grid defines alignment and proportion across mobile layouts. Even when layouts break into scroll patterns, elements still follow grid-based spacing and sizing.

Buttons

Diagram illustrating the layout and styling of a component, showing the relationship between the container, border, padding, and content area.

The diagram shows a container with a total width of 449 and a total height of 2343. The container has a border of 8 pixels. Inside the container, there is a padding area of 8 pixels. The content area is 47 x 16 pixels. The diagram also shows the relationship between the container, border, padding, and content area, with dimensions and offsets.

Diagram labels and dimensions:

- Container width: 449
- Container height: 2343
- Border: 8
- Padding: 8
- Content area: 47 x 16
- Offsets: 24 (left), 20 (top), 8 (bottom), 8 (right)

border-box

Layout

```
1 display: inline-flex;
2 min-width: 64px;
3 min-height: 32px;
4 max-height: 32px;
5 padding: var(--xs, 8px) var(--s, 12px);
6 justify-content: center;
7 align-items: center;
8 gap: var(--2xs, 4px);
```

Style

```
1 border-radius: var(--radius-s);
2 background: var(--surface-brand, #4A16D9);
```

Scaling Component Creation with AI

Instead of prompting AI from scratch for every component, I created an MD guideline that encoded our design rules and decision making framework.

1

Define the rules

Documented the design language, component principles, do's and don'ts, proper ties, states and expected behaviours.

2

Guide the AI

The guideline also defined what AI should clarify when a designer's prompt was incomplete, instead of making assumptions

3

Build with consistency

The team used the guideline alongside their prompts to generate the initial core components faster, while staying aligned with the system.

4

Design review

Generated components were reviewed and refined by designers before becoming part of the core system.

The goal wasn't to automate design. It was to automate the repetitive decisions so designers could focus on the quality of the system.

SCALING WITH AI

Design.md

DESIGN.md -- Bricks Design System

Structure trees auto-split (~52k tokens — too large for one AI context): per-page trees are in DESIGN-structure/. Use --no-split to force a single file.

1. Identity

In **one line**: A design system using Inter, Google Sans Flex, Menlo with 109 unique colors extracted directly from Figma.

Signature Techniques:

- Consistent auto-layout spacing system
- Component library with 160 variants across 5 component sets

2. Color

Palette

Business Benefits of Design System

1

Consistency

A shared foundation brought consistency across products, from typography & spacing to components and interaction patterns.

2

Efficiency

The AI guideline gave designers a consistent starting point while keeping design decisions and review with the team.

3

Scalability

Teams have a shared foundation they can build on as product need emerges

IMPACT ON DIFFERENT TEAMS

FOR DESIGNERS

No redrawing UI, More Problem Solving

FOR ENGINEERS

Less Tech debt,
**Cleaner reusable code
base**

FOR LEADERSHIP

**Faster launches ,
measurable efficiency
gains**

FOR USERS

**Consistent, delightful
experience**

Expected ROI after DS Implementation

1

~ 35%

Cost Saving

2

~ 40%

Cost to Market

3

~ 35%

Design Efficiency

4

~ 31%

Dev Efficiency
